

Product Specification Sheet

LCA MagicGEL Alginate

Four things make MagicGEL great:

1. **Smooth mixing.** MagicGEL quickly mixes to a smooth consistency.
2. **Flowable Formulation.** MagicGEL is one of our flowable alginates. It is ideal for large hand casting jobs, for beginners just learning hand casting and for lifecasters that like doing face and/or torso molds with a thinner, more flowable alginate.
3. **Snap Set.** MagicGEL goes from liquid to solid very quickly. For hand casting jobs this is an ideal property. It sets in about 5 minutes when mixed with 70°F water. Use 80° and this shortens to about 4 minutes 15 seconds.
4. **Extreme Density and Strength.** MagicGEL sets very firmly and strong. Extreme “pull-break” and “bend-break” strength makes this alginate ideal for a lot of projects.

MagicGEL	5 min. w/70°F water	Purple	Pourable	For Hand Casting and some Body Casting
